

# **Academician Dyusembin H. D. and his book "Braking and stimulation of a lactation at animal"**

In the book results of the experimental works performed by the author within the last decade and also literary data of domestic and foreign researchers in the field of lactation physiology are generalized. The main problem lifted in the monograph – hormonal stimulation confidentially – motor function of a mammary gland of farm animals. Questions of braking of a molokootdacha and a gipolaktiya are taken in detail up, scientific reasons for application complex an action for a successful intensification of dairy livestock production are this. The book is expected biologists, physiologists, livestock specialists, veterinarians, teachers and students of higher education institutions of a biological profile.
