

## List of exam questions

1. Definition and types of logistics systems
2. System approach in Logistics
3. Designing the systems in logistics
4. Prognostics in logistics
5. The concept and role of strategy in logistics
6. Stages of strategic planning logistics system
7. Goals and objectives of the procurement logistics
8. The choice of solutions to "buy or make"
9. Establishment of the enterprise resource requirements
10. Determination of the method of procurement resources
11. Choice of provider resources
12. The concept, nature and the need for inventories
13. The definition of inventories in demand for production
14. Inventory Management Systems
15. Control of the inventories
16. The main functions of the warehouse system
17. Classification warehouses
18. Performance Warehouse
19. Determination of the size of storage space
20. Determination of the need for the storage equipment and hoisting mechanisms
21. The concept, objectives and tasks of production logistics
22. Comparison of the traditional concepts of production and logistics organization
23. The push and pull system of production organization
24. Determination of the need for material resources for the production process
25. The essence of the basic tasks and functions of distribution logistics
26. The channels in the distribution chain and logistics
27. Determination of the locations of regional distributors
28. The main activities of the federal and regional governments in the field of distribution logistics
29. Relationship Marketing and Logistics
30. Essence and transport logistics tasks
31. Types of transport systems and their technical and economic characteristics
32. Determination of the need for vehicles and containers
33. Transport-technological systems and logistics providers
34. The main documents regulating the traffic rules and transport documents
35. Highway Traffic Routes
36. The concept of transport tariffs
37. The basic concepts of financial logistics
38. The financial relationship of logistics systems
39. Flow processes in logistics: the concept of cash flow
40. Types of non-cash payments in the organization of financial flows in the logistics system
41. The movement of financial flows in the enterprise
42. Information flows. Signs of classification
43. The concept of information logistics system
44. The principles of creation of information systems
45. The functional structure of the logistics information system
46. The role of information technology in logistics
47. The concept of logistics service
48. Criteria for the quality of logistics services
49. Formation of logistics service system

50. Determination of the logistics service level
51. Flow processes in logistics: the concept of the flow of services
52. The effectiveness of the use of bar coding technology in logistike..123
53. The classification of costs in logistics
54. The concept of commercial logistics
55. Logistics of foreign trade operations. fundamentals
56. Customs clearance of material flows in foreign operations
