Siberian art of genetics under frost hardening

Posted By [Zaure G. Aytasheva](#), Tuesday, February 05, 2013

Dr. Saniya Dauletbaeva and Dr. Zhasira Zhunusbaeva, staff teachers of the Department of Molecular Biology and Genetics have successfully accomplished their research trip to the State University of Tomsk according to the grant of the Russian Foundation of Basic Research (RFBR No. 12-04-90910) they had won to develop skills in fields of plant genetics and breeding, cytogenetics and molecular biology.

University of Tomsk is one of the oldest educational establishments in Russia which was founded in 1878. Nowadays it is one of large research centers that has reached the honorary status of National Research University. TGU Institute of Biology is known for powerful working facilities as highly qualified personnel fulfilling a range of long-term as versatile research and educational programs.

Last research mission has allowed to acquire theoretical knowledge and practical skills regarding new research and educational technologies, new techniques and handling new equipment apart from participation in international conference of young scientists.

Based on a new experience, department's teachers hope to design new projects to be able to purchase 3D-microscope as other facilities required at the Faculty of Biology and Biotechnology. They are keen to have mutually beneficial cooperation extended.
